

MECHANICAL LOCKING DEVICE FOR ELECTRIC ACTUATORS

INTRODUCING OUR LATEST INNOVATION

The perfect solution to prevent unwanted operation of your EFRD valve

FEATURES AND OPTIONS

- Locks the pipeline valve actuator in the open position and prevents unwanted valve closures
- Can be used with any of the major electric motor actuators
- Both clockwise and counterclockwise rotations
- Weather protection (sealed enclosures)
- Compact and heavy duty design
- Conforms to customer's voltage requirement
- Flexible design to fit between any electric actuator and gear box combination

An Emergency Flow Restricting Device (EFRD) is a requirement of the Pipeline and Hazardous Materials Safety Administration DOT. 195.452.

LEADING CHANGE

As a leader in valve automation, we are pleased to introduce the mechanical locking device for all electric actuators.
